PROFESSIONAL SUMMARY

Recently graduated Software Engineer (Magna Cum Laude, UCE 2026), bilingual (ES/EN). I have independently built two functional SaaS platforms: a debt management system for a transportation agency and a complete management platform for a laundry business. I work with Next.js, TypeScript, Node.js/Express, and Supabase. I am seeking to join a dynamic team where I can contribute my ability to build end-to-end web solutions while continuing to expand my technical skills and add value to real-world projects.

PROFESSIONAL EXPERIENCE

Systems Department Intern | Live Aqua Punta Cana Hotel (Grupo Posadas)

May 2025 – June 2025

- Provided technical support and hardware maintenance in a high-availability corporate environment: component replacement (HDD, RAM, power supplies), data migration between devices, and OS updates.
- Reintegrated devices outside the corporate domain (Active Directory), reconfigured user profiles, and validated permissions to restore access to shared network resources.
- Diagnosed and resolved network connectivity issues (RJ45 cabling, switches) and configured ONT devices in guest rooms to ensure internet, TV, and telephone service.
- Restored the hotel's passport scanning system: identified the root cause (incorrect mapping of shared network folders), reconfigured the path, and restored service.
- Maintained technology inventory: updated equipment records, licenses, and change documentation.

Full Stack Developer | Transportation Debt Management & Billing SaaS | Transportation Agency

Dec 2025 – Jan 2026

- Built a SaaS platform for customer and debt management for a transportation agency, optimizing operational workflows.
- Implemented CRUD functionalities for customer portfolio and debt management, improving data integrity and accessibility.
- Developed an automated billing and payment system with email notifications, significantly reducing manual errors and collection time.
- Configured system-wide auditing (logs) to ensure full data traceability and enhance security.

Full Stack Developer | Laundry Billing & Management SaaS | Lavandería Rodríguez

March 2026 – April 2026

- Designed and developed a billing and management platform using Next.js (TypeScript/TSX), Node.js, and Express, with Supabase for persistence and authentication, and responsive UI/UX design.
- Designed a hybrid billing system for services and products, automating the entire workflow from order intake to thermal invoice printing.
- Created a real-time financial analytics module that calculates net profitability by correlating income and operational expenses in a dynamic dashboard.
- Implemented multi-currency logic with dynamic exchange rate conversion to accurately process payments in different denominations.
- Established a Role-Based Access Control (RBAC) system to separate operational and administrative functions and protect sensitive data.

FEATURED PROJECTS

- **NovaCare Medical Center — Landing Page:** Developed a modern bilingual (ES/EN) medical landing page using Next.js 15, TypeScript, Tailwind CSS, and Framer Motion. Implemented responsive design, smooth scroll-based animations, SEO optimization, WhatsApp integration, and a conversion-focused contact system.
Demo: nova-care-two.vercel.app
- **Dental Clinic — Landing Page:** Built a responsive, SEO-optimized website using Next.js and Shadcn UI, focused on patient conversion.
Demo: landing-dental-sigma.vercel.app

EDUCATION

Ingeniería de Software | Universidad Central del Este (UCE)

2021 – 2026 | República Dominicana

- Graduated Magna Cum Laude.
- Official degree registered with MESCYT certification; Exequatur in progress

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C#, SQL, HTML, CSS

Frameworks/Librerías: Next.js, React, Node.js, Express.js, Drizzle ORM

Tools/Backend: Supabase, PostgreSQL, Git, GitHub

Specialties: UI/UX Design, Web Accessibility, SaaS Architecture, RBAC, Audit Logs

LANGUAGES

- Spanish: Native
- English: Upper-Intermediate (B2)
